

solar panel math

If using solar panel

0.6 watt output from two solar panels but lets be conservative so lets say 0.1 watt output

0.1 watt output means for 1 watt minute it will take 10 minutes

Input 0.1 watt

6 watt minutes in one hour

Output

1 watt for UVC led **1 minute**

0.5 watt for two servos **30 seconds**

0.5 watt for Arduino **2 minutes**

0.1 watt for coloured LEDs **1 minute 30 sec**

0.1 watt for photoresistor **10 seconds**

60 watt seconds + 15 watt seconds + 60 watt seconds + 1 watt seconds + 12 watt seconds

2 minutes 35 seconds output per activation

Constant drain

0.05 watts from power down mode Arduino
